

Home electronics demand outlook, H2 2026

July 2026

Demand for large appliances and TVs should recover modestly in the second half as prices settle, with instalment plans carrying a growing share of sales.

Summary

- Second-half demand for home electronics is expected to grow 4–6% over the first half, after two quarters of price-led softness.
- Instalment and buy-now-pay-later plans now fund an estimated one in three large-appliance purchases, up from one in five a year ago.
- Premium TVs and inverter air conditioners lead the recovery; small appliances stay flat.

What we see

- Retail prices rose sharply in H1 and are now stabilising, which historically releases deferred purchases within two quarters.
- Dealer inventory is lean going into Q4, so availability, not demand, is the more likely constraint on the busy season.

Demand by category, H2 vs H1 (illustrative)

CATEGORY	H2 VS H1	MAIN DRIVER
Televisions (55" and up)	+9%	Replacement cycle, sports season
Air conditioners (inverter)	+7%	Energy running costs
Refrigerators	+4%	Instalment plans
Washing machines	+3%	New housing completions
Small appliances	0%	Price sensitivity

What it means for Meridian

- Home Electronics should secure Q4 stock for premium TVs and inverter AC now, while principals still have allocation.
- Extend the warranty bundles to the instalment channel, where attach rates run highest.
- Plan dealer credit limits for a heavier Q4 than the first-half run rate suggests.
